

Zachary Gameiro

Burnaby, BC | zachary_gameiro@sfu.ca | linkedin.com/in/zachary-gameiro | github.com/zacharydagameiro | zacharydagameiro.github.io

TECHNICAL SKILLS

Programming: Python, TypeScript, JavaScript, SQL, C/C++
AI / ML: PyTorch, RAG, LLM workflows, OCR pipelines, clustering, graph embeddings, DBSCAN/HDBSCAN
Data & Platforms: PostgreSQL, Supabase Edge Functions, webhooks, cron jobs, structured extraction, schema validation
Cloud & Tooling: Google Cloud Run, Docker, Git, Linux, debugging, experiment iteration
Languages: English, French, Portuguese

EDUCATION

Simon Fraser University Burnaby, BC
Bachelor of Science, Joint Major in Computing Science and Microbiology & Biochemistry Expected May 2027

APPLIED AI / ML PROJECTS

Receipt OCR — Personal Project 2025

Python, PaddleOCR, Docker, Google Cloud Run, LLM | GitHub

- Built a **Python**-based OCR pipeline that converts noisy receipt images into structured JSON using layout reconstruction and lightweight LLM parsing.
- Reworked the extraction path and improved throughput by roughly **200%** versus the earlier prototype.
- Added normalization and validation layers to keep outputs consistent across merchant layouts and messy inputs.

Plutos Pay (Transaction & Spending Tracker) — Personal Project 2025

- Built a **RAG-backed** chatbot that answered natural-language questions over normalized transaction data.
- Implemented data ingestion, categorization, and aggregate-query workflows so AI-generated answers stayed grounded in real user records.
- Used Supabase Edge Functions, PostgreSQL queue processing, webhooks, and cron jobs to support reliable bulk and streaming updates.

ACADEMIC PROJECTS

SMLM Clustering with Graph Embeddings — School Team Project 2025

Python, PyTorch, MIRO, DBSCAN, HDBSCAN | GitHub

- Co-built a microscopy-data clustering pipeline using MIRO graph embeddings and density-based clustering to recover biological structures from noisy localization data.
- Trained and evaluated embedding workflows across repeated runs to improve structure recovery quality.

Ferry Terminal Booker — School Team Project 2025

C, File I/O, Disk Storage, CLI | GitHub

- Co-built a C-based reservation system with flat-file storage, payment workflows, and occupancy checks.
- Implemented validation and safe read/modify/write patterns to keep stored records consistent without a database.

EXPERIENCE

Sherwood Park Toyota — Online Sales & Marketing May 2024 – Aug 2024

- Managed customer communication and sales-process workflows in a high-volume environment.
- Identified a repetitive documentation bottleneck and built an internal automation workflow to simplify the process and improve consistency.

BCLDB — Consultant Aug 2025 – Present

- Worked in a process-heavy retail environment requiring accuracy, verification, and dependable execution.
- Maintained consistent service while following policy constraints and communicating clearly with customers and teammates.
