

Zachary Gameiro

Burnaby, BC | zachary_gameiro@sfu.ca | linkedin.com/in/zachary-gameiro | github.com/zacharydagameiro | zacharydagameiro.github.io

TECHNICAL SKILLS

Front End: React, React Native, TypeScript, JavaScript, HTML/CSS, responsive UI implementation
Backend: Express-style APIs, PostgreSQL, Supabase, Firebase, Firebase Functions, webhooks, cron jobs, aggregate queries
Cloud & Delivery: AWS, Google Cloud, Cloud Run, Docker, Git, staged environments, debugging
State / Data Flows: Redux, RTK Query, normalized data models, API integration, queue-based processing
Languages: English, French, Portuguese

EDUCATION

Simon Fraser University Burnaby, BC
Bachelor of Science, Joint Major in Computing Science and Microbiology & Biochemistry Expected May 2027

FULL-STACK PROJECTS

Haulr — Personal Project (Independent Build) 2026

React, TypeScript, Firebase, Stripe, Mapbox | Live Demo

- Built a multi-app product from the ground up, owning the customer site, operations dashboard, and admin tools as a single developer.
- Shipped end-to-end flows for lead intake, quoting, scheduling, billing, and operational coordination across the stack.
- Handled backend workflow logic, permissions, data modeling, and front-end implementation instead of working in a narrow lane.

Ploutos Pay (Transaction & Spending Tracker) — Personal Project 2025

React Native, TypeScript, AWS, Firestore, Supabase, PostgreSQL, Plaid

- Built a finance app with transaction ingestion, categorization, geolocation, aggregate querying, and a chatbot over normalized user data.
- Worked through multiple backend iterations, moving from AWS-backed early prototypes to Firestore / Google Cloud and then to Supabase / PostgreSQL.
- Used Redux and RTK Query to keep client-side state, requests, and cached data flows reliable.

Receipt OCR — Personal Project 2025

Python, PaddleOCR, Docker, Google Cloud Run, LLM | GitHub

- Built an AI-driven pipeline that converts receipt images into structured JSON for downstream product and data workflows.
- Reworked the architecture and improved throughput by roughly **200%** versus the earlier prototype.
- Added normalization and validation to keep outputs reliable on messy real-world inputs.

ACADEMIC PROJECTS

SMLM Clustering with Graph Embeddings — School Team Project 2025

Python, PyTorch, MIRO, DBSCAN, HDBSCAN | GitHub

- Co-built a Python/PyTorch workflow for clustering noisy microscopy data and evaluating results across repeated experiments.
- Worked in a team setting to improve outputs through iterative testing and analysis.

Ferry Terminal Booker — School Team Project 2025

C, File I/O, Disk Storage, CLI | GitHub

- Co-built a reservation system with validation, search flows, and reliable stored-record updates.
- Helped design operator-facing flows that kept data consistent and workflows usable.

EXPERIENCE

Sherwood Park Toyota — Online Sales & Marketing May 2024 – Aug 2024

- Managed customer communication and sales-process workflows in a high-volume environment.
- Identified repetitive workflow problems and built internal automation to improve consistency and delivery speed.

BCLDB — Consultant Aug 2025 – Present

- Work in a fast-paced, policy-driven environment requiring dependable execution and strong communication.
- Handle customer-facing workflows with consistency, attention to detail, and operational discipline.
