

Zachary Gameiro

Burnaby, BC | zachary_gameiro@sfu.ca | linkedin.com/in/zachary-gameiro | github.com/zacharydagameiro | zacharydagameiro.github.io

TECHNICAL SKILLS

Programming: Python, TypeScript, JavaScript, SQL, C/C++

Cloud & Services: AWS, AWS Lambda, Amazon QLDB, DynamoDB, IAM, Google Cloud, Cloud Run, Firebase Functions, Firestore, Realtime Database

Backend Systems: PostgreSQL, Supabase, Supabase Edge Functions, REST APIs, webhooks, cron jobs, queue-based processing, schema validation

Delivery & Testing: Docker, Git, Linux, Postman, Jest, Mocha, endpoint testing, staged environments, debugging

Languages: English, French, Portuguese

EDUCATION

Simon Fraser University

Bachelor of Science, Joint Major in Computing Science and Microbiology & Biochemistry

Burnaby, BC

Expected May 2027

BACKEND / CLOUD PROJECTS

Ploutos Pay (Transaction & Spending Tracker) — Personal Project

2025

React Native, TypeScript, AWS, Firestore, Supabase, PostgreSQL, Plaid, Webhooks

- Built an evolving finance application whose backend moved from an early **AWS** prototype using Amazon QLDB, DynamoDB, IAM, and AWS Lambda to a Firestore / Google Cloud version and now to a Supabase / PostgreSQL architecture.
- Integrated Plaid, webhooks, and scheduled sync jobs to handle bulk transaction imports, ongoing account updates, and streaming ticker-style data flows across backend iterations.
- Used Supabase Edge Functions, queue-based processing, and staged environments to keep backend migrations and data-flow changes reliable.

Receipt OCR — Personal Project

2025

Python, PaddleOCR, Docker, Google Cloud Run | GitHub

- Built a **Python** service deployed on **Google Cloud Run** that converts noisy receipt images into structured JSON through OCR, layout reconstruction, and parsing.
- Improved throughput by roughly **200%** versus the earlier prototype while keeping the pipeline maintainable through schema-first validation.
- Containerized the service with Docker to support repeatable deployment and easier environment control.

Haulr — Personal Project (Independent Build)

2026

React, TypeScript, Firebase, Cloud Functions, Stripe, Mapbox | Live Demo

- Built backend workflows for quoting, scheduling, billing, and role-aware access control across a multi-app operations platform.
- Maintained callable-function logic, permissions, and environment-separated deployment paths while evolving the data model.

ACADEMIC PROJECTS

Ferry Terminal Booker — School Team Project

2025

C, File I/O, Disk Storage, CLI | GitHub

- Co-built a flat-file reservation system with payment handling, search flows, and occupancy checks.
- Implemented safe read/modify/write patterns to keep stored records consistent without a database.

SMLM Clustering with Graph Embeddings — School Team Project

2025

Python, PyTorch, MIRO, DBSCAN, HDBSCAN | GitHub

- Co-built a Python/PyTorch workflow for clustering noisy microscopy data and evaluating outputs across repeated experiments.
- Iterated on the pipeline collaboratively, using testing and analysis to improve structure recovery.

EXPERIENCE

Sherwood Park Toyota — Online Sales & Marketing

May 2024 – Aug 2024

- Managed customer communication and sales-process workflows in a high-volume environment.

- Identified a repetitive documentation bottleneck and built an internal automation workflow to simplify the process and improve consistency.

BCLDB — Consultant

Aug 2025 – Present

- Worked in a process-heavy environment requiring accuracy, teamwork, and dependable execution under time pressure.
- Maintained consistent service while following policy constraints and communicating clearly with customers and teammates.
